

- Page 6: According the Texas Tech analysis of data on state parks compiled by the National Association of State Park Directors in the year 2000, 45.2 acres of state parkland per 1,000 is the national average of all states, excluding Alaska (this includes recreation areas, natural areas and historic areas). There is an on-going debate among state park system professionals on supply standards for parkland. There are many variables to consider, including the amount of land needed to meet various uses, such as biking, hiking, rock climbing; distance of parkland from population centers, etc. According to the Texas Tech analysis, forty-five acres per 1000 people is considered a reasonable minimum goal for Texas state parks and wildlife land. (Texas Tech, 2000)
- Page 7: The current state average for local parks is 12.2 acres per 1,000 people, rather than 13.9 acres per 1,000 people. (This is based on a Texas population of 20,124,384)
- Page 8: As of the year 2001, Texas has 31.5 acres of state parkland per 1,000 people and 20.4 acres of state wildlife land per 1,000 people, for a total of 51.9 acres of state parks and wildlife land per 1,000 people.
- Table 2, page 8: Under the Texas column, the figures should reflect that there are 31.5 acres of state parks per 1,000 people, 12.2 acres of local parks per 1,000 people, and a total of 181.6 acres of parks and recreational areas per 1,000 people.
- Table 6, page 14: The total local park acreage in Texas is 246,092 rather than 279,633 (includes city, county, river authority parks).
- Page 18: The City of Austin, Travis County, the Nature Conservancy of Texas, Travis Audubon, and the Lower Colorado River Authority, not the Trust for Public Land, manage the Balcones Canyon Lands Preserve.
- Page 19: In addition to the 156,000 acres in Texas with a conservation easement, there are 109,484 acres owned for conservation purposes by non-profit land trusts, and 42,007 acres held for conservation purposes through other types of conservation approaches. Statewide, a total of 307,717 acres in Texas are conserved by non-profit land trusts.
