RE: Evaluation of SWIFT Capitalization Funding Models

This memorandum is provided to you as a supplement to HB 4 and HB 11. I have asked the Texas Water Development Board (TWDB) to develop several Capitalization Funding Models (CFMs) as an illustration of how to appropriately and adequately fund the *Water for Texas 2012 State Water Plan* (SWP) in full. All models begin with either an initial capitalization or a combination of an initial capitalization/ on-going capitalization in order to create a “revolving” State Water Implementation Fund for Texas (SWIFT). The SWIFT provides financing for loans from capitalization funds, loan repayments (“recycled” funds), and bond issues that are leveraged by those capitalization funds and loan repayments.

Eight models have been produced to illustrate the maximum financial assistance that would be provided through various state financing strategies. The first four models utilize an initial capitalization of \$2 billion, and the following four models utilize an initial capitalization of \$1 billion for comparison. The models also reflect the possible inclusion of \$130 million per year of on-going capitalization for up to 10 years following fiscal year 2014, as well as the possible inclusion of existing Water Infrastructure Fund (WIF) and State Participation Program (SPP) debt. As of August 31, 2012, there was \$733.4 million and \$149 million in bonds outstanding for the WIF and SPP programs, respectively.

This document includes several findings, general assumptions, and repayment assumptions developed by the Legislative Budget Board in their review of the models. In addition, attached are various supporting documents including: 1) a *Summary of Capitalization Models Requested*, 2) a detailed account of each model, and 3) a *Cost Comparison of Traditional and Capitalization Funding Models*.

FINDINGS

1. The Traditional Debt Service (TDS) model has previously been funded with General Revenue appropriated for debt service when available and with no “revolving” component. Although the TDS model may have some benefits, such as funding \$15.7 billion in the first decade of need (2010 – 2019), there is insufficient capacity under the CDL to provide the \$26.9 billion in

financial assistance requested by the regional planning groups. However, if a TDS model was self-supporting, with a dedicated revenue stream as the source of debt service payments, rather than General Revenue, the model could also have no impact on the CDL. Although this is the case, a TDS model would cost more through 2060 at \$8.6 billion compared to the \$1 billion to \$3.4 billion capitalization scenarios presented in CFMs #1 – 8.

2. There is insufficient capacity under TWDB's existing \$6 billion evergreen authority to accommodate the General Obligation (GO) bond issuances necessary under the TDS model. For example, five years of GO bond issuances at \$1.2 billion per year (\$6 billion) would exceed available evergreen authority, after taking into account outstanding bonds for the WIF program.
3. The requested CFMs provide for a 2% interest credit for WIF programs only. The SWIFT would need the flexibility to respond to changing market conditions, either higher or lower rates in future years – to manage the capacity of the revolving program. This could be accomplished by allowing the agency to continue to use its current WIF guidelines and providing guidance to the agency on the adjustment of its guidelines for interest rate credits, which are linked to the interest rates for TWDB bond issues.
4. In the 2012 SWP, regional planning groups identified a funding need of \$26.9 billion of state assistance in years 2010 – 2060. Four of the targeted CFMs adequately provide funds to meet this need. The regional planning groups also identified a funding need of \$15.7 billion in years 2010 – 2019. None of the targeted CFMs provide \$15.7 billion in the first decade of need.
5. Due to the lengthy and deferred repayment structure, the TWDB reports that for any particular CFM, the SPP portion would begin to revolve from the capitalized corpus in year 20, but it would not fully revolve until year 34. Repayments in years 1-20 would be lent again or used to leverage bonds but with a much smaller capacity. For example, in CFM #1, the first repayments appear in fiscal year 2018 (estimated to be \$1 million) and would leverage only an additional \$15 million in bonds for additional loans. Accordingly, SPP projects would not revolve at the same rate as WIF projects, however, SPP could still be revolved at a much slower rate.

GENERAL ASSUMPTIONS

Capitalized Revolving Loan Program with Leveraged Debt

Each CFM would revolve with a combination of loans from two sources: capitalization funds (a one-time and/ or series of cash infusions) and leveraged bond debt. These assumptions are included in each model and vary with the amount of capitalization.¹ For example:

- In CFM #1, \$2 billion in capitalization amounts for loans in fiscal year 2014 yields \$90 million in repayments in fiscal year 2015, sufficient to leverage \$395 million in bonds for additional loans; and

¹ Currently, the TWDB manages other revolving funds in a similar fashion, most notably the Clean Water State Revolving Fund.

- In CFM #5, \$1 billion in capitalization amounts for loans in fiscal year 2014 yields \$45 million in repayments in fiscal year 2015, sufficient to leverage \$180 million in bonds for additional loans.

Allocation between WIF and SPP Projects

All CFMs are split 87% WIF and 11% SPP, consistent with projects identified by the regional planning groups in the 2012 SWP. WIF Rural projects are not currently included in any CFMs, although this program accounts for 2% of the financing needs indicated in the 2012 SWP. This amount could, however, be incorporated into any of the models.

Inflation

The requested CFMs do not include an inflation factor. Since the capitalization models are based on project funding capacity rather than project specific amounts, the models do not include an inflation factor nor is such an adjustment required. As a point of reference, the TWDB did include an inflation assumption of 3.8% in the TDS model the agency developed for 2012 SWP projects by decade of need.

Interest Rates

The agency assumption of a 5.5% interest rate and 20-year level debt repayment schedule for WIF projects is based on the 30-year average for the Municipal Market bond index and appears to be reasonable. Also, this interest rate is consistent with the 6% rate the Texas Public Finance Authority will use to estimate debt service requirements for similar GO and revenue bond issues beginning in fiscal year 2014. Note that interest rates are subject to market conditions.

REPAYMENT ASSUMPTIONS

1. WIF construction loans generally have a 20-year term, with interest repayments beginning within six months of closing, and principal payments within 12 months of closing.
2. WIF deferred loans generally have a 20-year term and statutorily can defer principal and interest for up to 10 years. Deferred loans to date have averaged a three year deferral. For purposes of the models, principal and interest have been deferred for five years.
3. SPP loans generally have a 34-year amortization. Loan terms generally have the structure below and have been modeled as such:

Years	Principal Repayment	Interest Repayment
1 – 2	0	0% of accrued interest
3 – 4	0	20% of accrued interest
5	0	30% of accrued interest
6	0	40% of accrued interest
7	0	55% of accrued interest
8	0	70% of accrued interest
9	0	85% of accrued interest

10 – 12	0	100% of accrued interest
13 – 19	0	100% of accrued interest plus equal portion of the previously deferred interest
20 – 34	Amortized principal	All accrued interest

The TWDB reports that the most recent requests for SPP financing, for example, have been from the Coastal Water Authority for the City of Houston (\$240 million) and the Guadalupe Blanco River Authority (\$320.5 million).

OTHER IMPACTS & RELATED ISSUES

Impact on the Constitutional Debt Limit (CDL)

Ultimately, none of the requested CFMs would impact the CDL, because General Revenue would not be appropriated for debt service. All bond debt, whether GO or revenue bonds, would be self-supporting.

Also, incorporating existing non-self-supporting debt for WIF and SPP programs into the revolving program would accelerate the pace at which the debt for these programs is reclassified to self-supporting debt. SPP and WIF bond issues are initially issued as non-self-supporting debt due to General Revenue appropriations for debt service. Once those bond issues begin receiving enough in loan repayments to pay the debt service, they are reclassified as self-supporting by the Bond Review Board.

Borrower's Advantage

For borrowers, there would be no difference in cost related to the source of financing, whether a loan from capitalization or recycled funds or a loan secured with leveraged bond debt. During any one year, a borrower's cost of financing from either source will be the same. The amount of interest credit at any given time for WIF programs could, however, make a large difference to the borrower in deciding whether to borrow from the SWIFT and under which program.

Debt Service Coverage Ratio

For bond issuances in any one CFM, assumptions include a 1.20 debt service coverage ratio, which would allow the agency to absorb a loan default rate of 20% while maintaining revenue (e.g., loan repayments, capitalization funds and/or interest) sufficient to cover bond debt service requirements.

Participation Rates

Other considerations include the possibility that applications for financing may fall short of CFM assumptions. However, a 50% application rate assumption would have the effect of preserving future capacity in the program.

Administrative Costs

None of the requested CFMs include any administrative costs associated with running the program. The TWDB estimates it would need additional staff to manage the program, depending on the amount of annual financing. Assuming an average project size of \$25 million, estimated costs are shown below:

Annual Financing	Number of Projects	FTEs	Estimated Annual Costs
\$250 million	10 – 19	None	\$0
\$500 million	20 – 29	8	\$705,879
\$750 million	30 – 39	12	\$1,058,819
\$1 billion	40 – 49	16	\$1,411,757

Note that in fiscal year 2014, there would be additional start-up costs related to adding new FTEs. Although these costs are shown here, it is not typical to require a bonding agency to absorb administrative costs within the bond program. Instead, the Legislature usually provides an appropriation from General Revenue or some other appropriate source for administrative expenses.

CONCLUSION

The creation of a revolving fund through a one-time capital infusion is the most fiscally responsible approach to implementing the 2012 State Water Plan. If the state provides an initial capitalization of \$2 billion, this amount can be leveraged to accomplish the \$26.9 million in state assistance requested by local entities, and ultimately, these funds will continue working indefinitely for the future of water supply in Texas.

If you have any questions or need additional information, please do not hesitate to contact Sean Haynes at 463-0706 or Elizabeth Fazio at 463-0802.

Thank you.

Texas Water Development Board
Summary of Capitalization Funding Models Requested

Water Infrastructure Fund and State Participation (includes prior debt)

Model	Initial Capitalization	On-going Capitalization	Years of Capitalization	Ongoing Prior Debt	Interest Credit	Estimated Maximum Financial Assistance		
						2014-2032	2032-2060	Total
1	\$2,000,000,000	\$ -	N/A	No	2.00% \$	12,874,000,000 \$	18,200,000,000 \$	31,074,000,000

								\$ -
5	\$1,000,000,000	\$ -	N/A	No	2.00% \$	6,461,000,000 \$	9,240,000,000 \$	15,701,000,000
6	\$1,000,000,000	\$130,000,000	2014-2024	No	2.00% \$	13,917,000,000 \$	19,600,000,000 \$	33,517,000,000
7	\$1,000,000,000	\$ -	N/A	Yes	2.00% \$	5,751,000,000 \$	8,680,000,000 \$	14,431,000,000
8	\$1,000,000,000	\$130,000,000	2014-2024	Yes	2.00% \$	13,559,000,000 \$	19,600,000,000 \$	33,159,000,000

Assumptions:

Provides both WIF Construction and WIF Deferred annual financing which constituted 87% of financing needs indicated in the 2012 SWP

Provides State Participation financing which constituted approximately 11% of the financing needs indicated in the 2012 SWP

Does not provide WIF Rural (0% financing) which constituted approximately 2% of the financing needs indicated in the 2012 SWP

Capitalization allocated 77% WIF Construction, 12% WIF Deferred, and 11% State Participation.

Maximum assistance provided with capitalized amount; additional staffing would be necessary to provide this level of financing

WIF Program would be leveraged with general obligation and/or revenue bonds to maximize capacity

SP Program would be leveraged with general obligation to maximize capacity

Program would have no impact on the Constitutional Debt Limit

Notes:

- 1) Traditional Model involves continued reliance on General Revenue to provide debt service on GO bonds, which affects the Constitutional Debt Limit (CDL).
- 2) Revolving models use loans from cash or self-supporting bonds, which would not affect the CDL.
- 3) Ongoing biennial costs for the traditional model provide for amortization under a debt service schedule, with issuance assumptions of 5.5 percent.
- 4) In the SWP, regional planning groups identified a funding need of \$15.661 in years 2010-2019. The Traditional Debt Service model funds this amount in 2014. None of the targeted CFMs provide \$15.661 billion in the first decade of need.
- 5) Neither CFM #5 or #7 achieve the \$26.9 billion the regional planning groups anticipated needing in state assistance.
